

Project Demo Planning

Date	2 July 2026
Team ID	
Project Name	A Comprehensive Measure of Well Being
Maximum Marks	1 Mark

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction to the Project	Introduce the concept of well-being (HDI) as a holistic measure of development beyond GDP, and state the project objective	3	Vaishnavi
2	Dataset & Model Overview	Explain the dataset (life expectancy, mean/expected years of schooling, GNI per capita) and the ML model used to predict the well-being category	3	Vaishnavi
3	Live Prediction - Very High Well-Being	Demonstrate Scenario 1: a country with high life expectancy, strong schooling, and high GNI per capita predicted as Very High	4	Vaishnavi
4	Live Prediction - Medium Well-Being	Demonstrate Scenario 2: a developing nation with moderate indicators predicted as Medium, highlighting improvement areas	4	Vaishnavi
5	Live Prediction - Low Well-Being	Demonstrate Scenario 3: a country with low life expectancy, limited education, and low GNI predicted as Low, highlighting challenges	4	Vaishnavi
6	Dashboard & Comparison Tool	Showcase the analytics dashboard and the country comparison feature for exploring well-being trends across countries	4	Vaishnavi

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Highlight why well-being needs to be measured holistically (life expectancy, education, income) rather than by income alone
2	Solution Overview	Explain the ML-based prediction system that classifies countries into Very High, High, Medium, and Low well-being tiers
3	Live Feature Demonstration	Walk through all three scenarios (Very High, Medium, Low) plus the dashboard and comparison tool
4	Q&A; Session	Address questions on model accuracy, data sources, and real-world applicability for policymakers
