

Coding & Solution

Date	5 July 2026
Team ID	xxxxxx
Project Name	A comprehensive Measure of the Well being
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/vaishnavi-pentyala/HDI-Predictor
Programming Language(s)	Python , HTML , CSS
Framework(s) Used	Flask ,Scikit-learn ,Pandas ,NumPy ,Matplotlib ,Seaborn ,Pickle
Key Features Implemented	Data preprocessing and cleaning , Exploratory Data Analysis (EDA) Linear Regression model , HDI prediction using Flask Model saved with Pickle , GitHub version control
Pending / Incomplete Features	Cloud deployment , Model optimization , Additional ML model comparison , UI enhancements
Setup / Run Instructions	1.Clone the repository. 2.Install the required libraries. 3.Run app.py. 4.Open the Flask application in a browser and predict the HDI score.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project follows a modular coding approach, making it easy to maintain and extend.
 Git and GitHub were used for version control and collaborative development.
 The Flask application provides a simple, user-friendly interface for HDI prediction.
 The solution demonstrates an end-to-end machine learning workflow, from data preprocessing to deployment.
