

Project Executable Files

Date	2 July 2026
Team ID	
Project Name	A Comprehensive Measure of Well Being
Maximum Marks	3 Marks

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	NA
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

/HDI_Predictor	
/charts	- Generated chart images/plots
/reports	- Generated analysis/PDF reports
/static	
/css	- Stylesheets
/images	- Image assets
/js	- Client-side scripts
/templates	
/partials	- Reusable HTML partials (navbar, footer, etc.)
about.html	- About page
compare.html	- Country comparison page
dashboard.html	- Dashboard / analytics page
index.html	- Home page
predict.html	- Well-being prediction input/result page
app.py	- Flask application entry point
dataset.csv	- Well-being indicator dataset used for training/refer
ence	
generate_dataset.py	- Script to generate/prepare the dataset
hdi_history.db	- SQLite database storing prediction history
model.pkl	- Trained ML model
README.md	- Setup and run instructions
requirements.txt	- Python dependencies
train_model.py	- Model training script
HDI_Predictor.zip	- Packaged project archive

Step 3: Deployment / Access Details

Hosted / Deployed URL	https://xxxx-xx-xx-xx-xx.ngrok-free.app (temporary public URL via ngrok tunnel)
Login Credentials (Demo)	Not required - application is publicly accessible
Platform / Hosting Provider	Local Flask server exposed via ngrok
Repository Link	https://github.com/smartbridge-team/HDI_Predictor
Demo Video Link	https://drive.google.com/wellbeing-index-demo-video

Step 4: Run Instructions

Pre-requisites:
Python 3.9 or higher, pip, and a modern web browser.

Step 1: Clone the repository: `git clone https://github.com/smartbridge-team/HDI_Predictor.git`

Step 2: Navigate to project folder: `cd HDI_Predictor`

Step 3: Install dependencies: `pip install -r requirements.txt`

Step 4: (Optional) Regenerate the dataset: `python generate_dataset.py`

Step 5: Train the model: `python train_model.py` (skip if model.pkl is already provided)

Step 6: Start the application: `python app.py`

Step 7: Open browser at `http://localhost:5000` to access the dashboard, prediction, and comparison pages

Step 8: (Optional) For a temporary public link, run ngrok on the same port and use the forwarding URL shown in the terminal

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Application is hosted locally and exposed via ngrok, so the public URL changes each time the tunnel restarts (unless a reserved domain is used)	Documented in README; evaluator should request the current session URL before testing
2	Model accuracy may reduce for countries with incomplete or outdated indicator data	Dataset (dataset.csv) periodically updated with latest well-being indicator reports
3	No automated test suite is currently included	Manual testing performed on all pages (dashboard, predict, compare); automated tests planned for a future iteration
